Control Fuzzy

Sistem de control Fuzzy

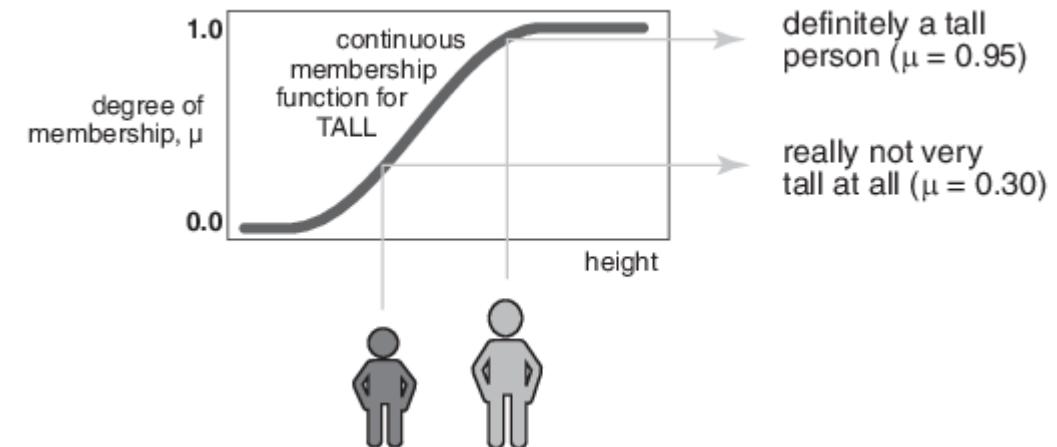

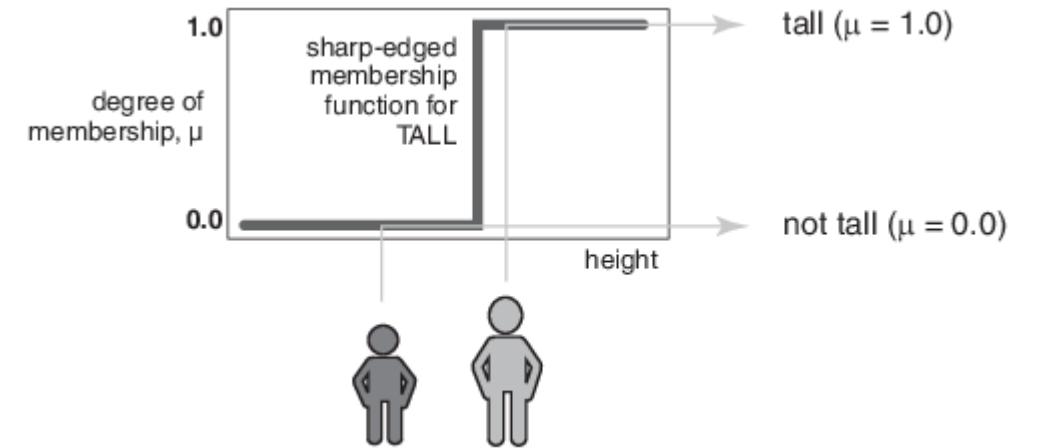

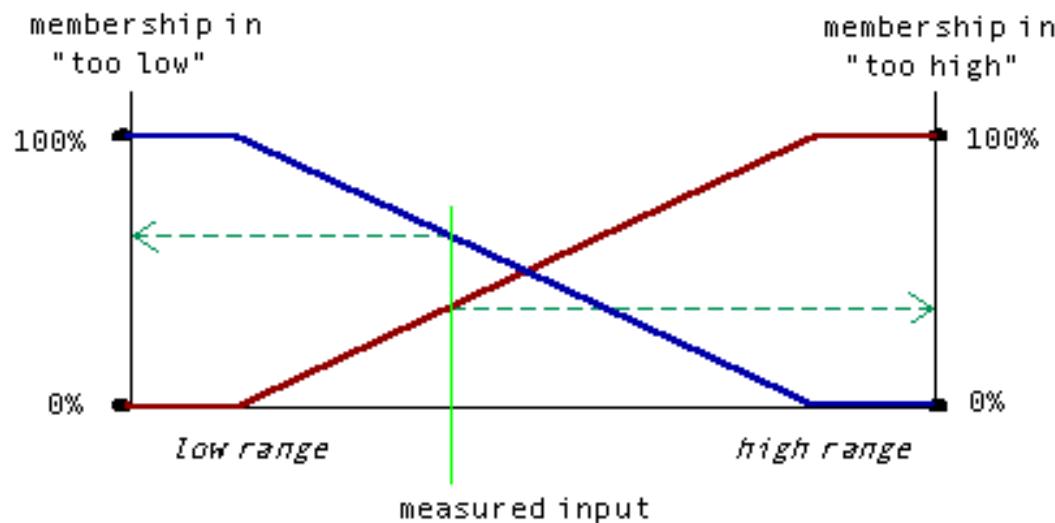

Un sistem de control fuzzy este bazat pe logica Fuzzy – logica nuanțată, vagă.

Logica Fuzzy – un sistem matematic care analizează valorile de intrare analogice în termeni de variabile logice care iau **valori continue între 0 și 1**, spre deosebire de logica clasica sau digitala.

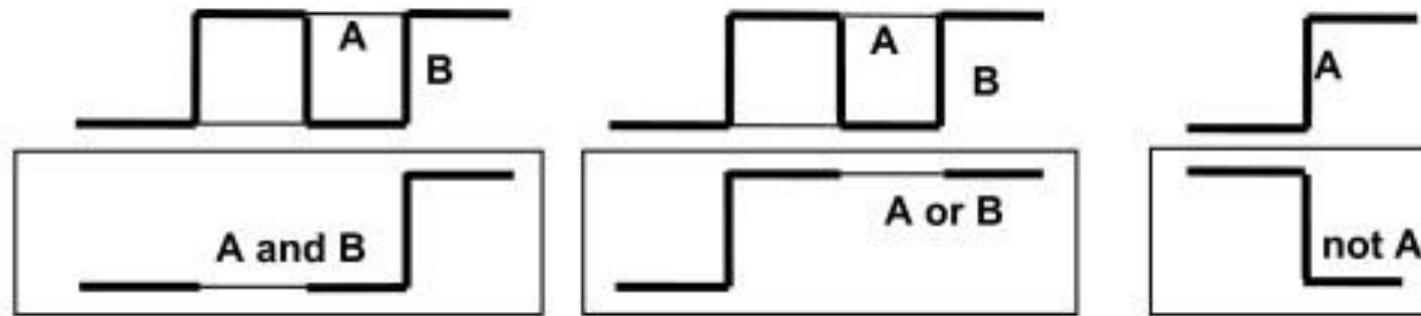

Mărimi Fuzzy Fuzzyficare

- Funcția de apartenență definește ponderea unei afirmații în domeniul de definiție a unui parametru
- Univers de discurs – totalitatea funcțiilor de apartenență / afirmații relevante aceluiași parametru
- Fuzzyficare – procesul de transformare a unei valori crisp într-un set fuzzy

AND
 $\min(A,B)$

OR
 $\max(A,B)$

NOT
 $(1-A)$

Baza de cunoștințe Reguli fuzzy

rule 1: IF temperature IS cool AND pressure IS weak,
THEN throttle is P3.

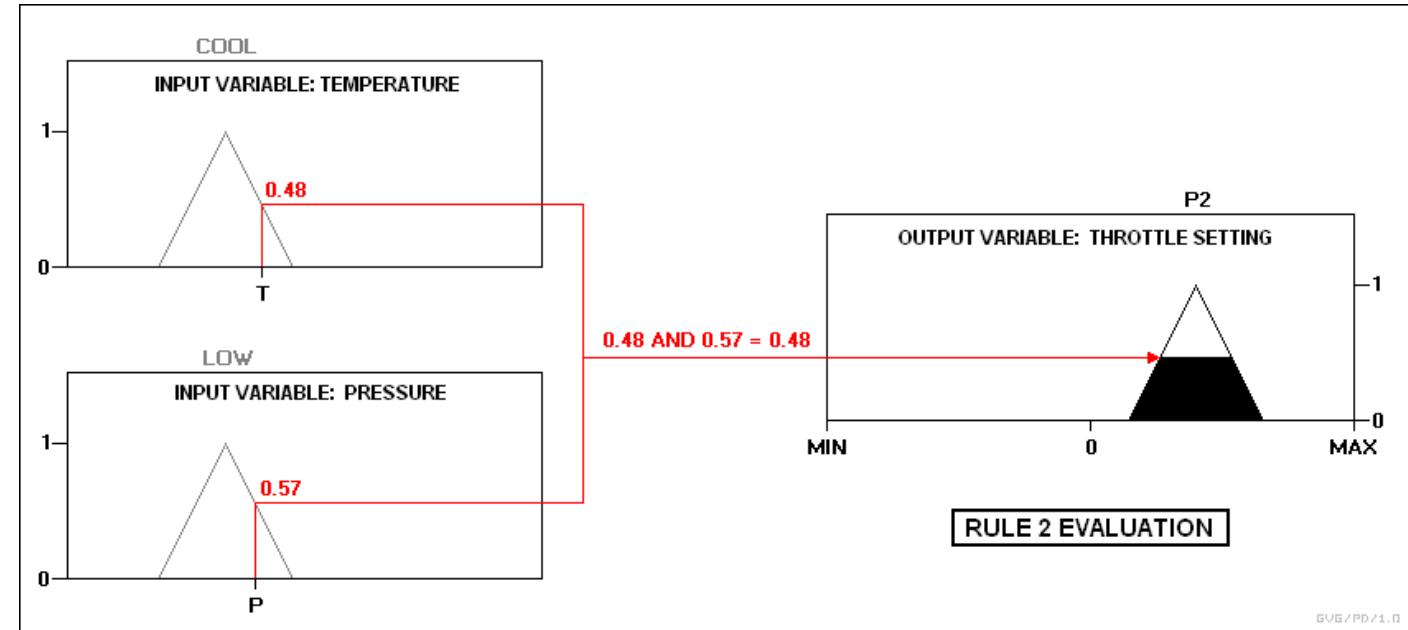

rule 2: IF temperature IS cool AND pressure IS low,
THEN throttle is P2.

rule 3: IF temperature IS cool AND pressure IS ok,
THEN throttle is Z.

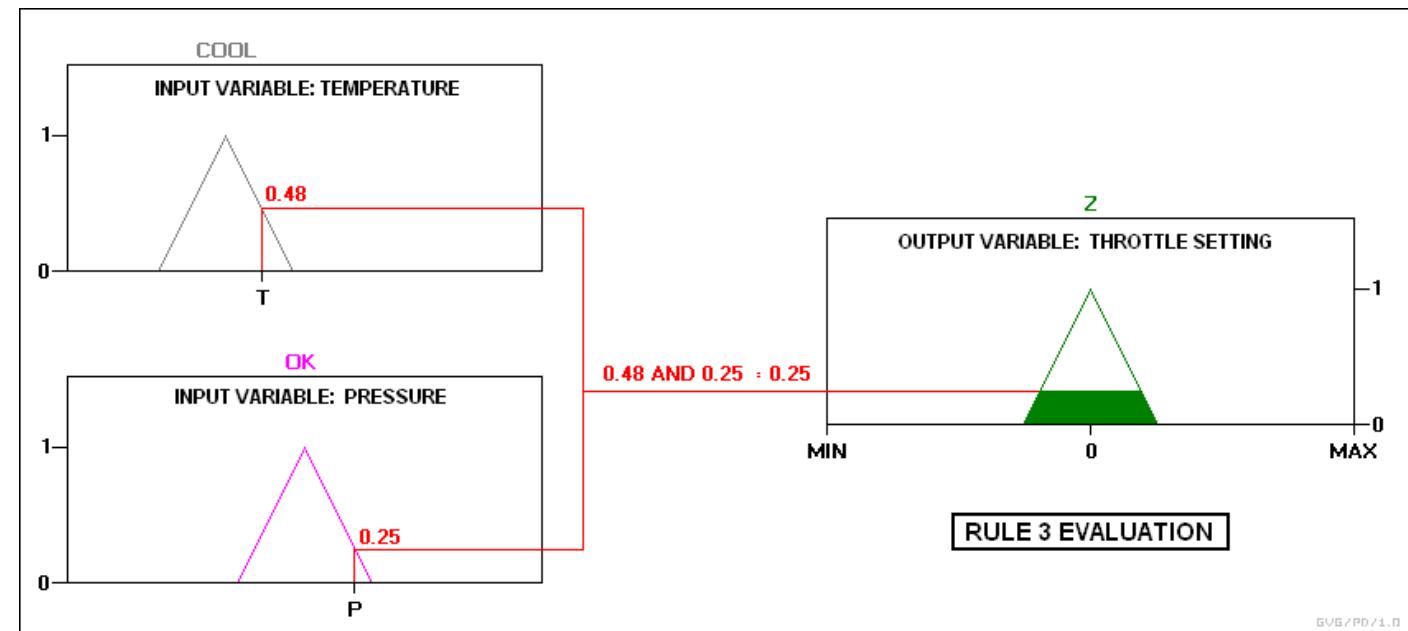

rule 4: IF temperature IS cool AND pressure IS strong,
THEN throttle is N2.
